

The Right Answers. When the Work Demands Them.

Who is Seacoast AI?

Seacoast AI is a consultancy helping organizations implement responsible and practical AI. The company works with corporations and agencies on real-world use cases, often involving sensitive data and complex workflows.

The Challenge

Work required pulling information from multiple systems:

- email
- CRM
- documents
- client data

This created delays before work could begin.

At the same time, sensitive data—such as RFPs and security-related information—could not be used with public AI tools.

Leverage changes that.

“

[With Leverage], I can confidently do my work knowing everything is happening in a private, secure environment.

Rebecca Emery
President,
Seacoast AI

How Leverage helps.

Enables horizontal search.

Leverage provides a single point of access to siloed systems, enabling teams to query information across multiple work applications simultaneously.

Handles business data privately.

With Leverage, work is completed in a secure environment without exposing data to public models.

Delivers answers and outputs.

Rather than manually piecing together information from different sources, Leverage analyzes search results across the entire work stack to provide Seacoast AI teams with complete answers and ready-to-use outputs.

How Leverage is used.

- Generate complete RFP responses using existing data and decision logic.
- Search and analyze large document sets instantly for SOPs and document queries.
- Access information across email, CRM, and files in a single workflow.

With Leverage, something that used to take hours now takes less than two minutes—and the first draft is highly accurate.

President

Results

- RFP responses generated in under 2 minutes
- 92% accuracy on first draft
- Hours of manual work eliminated per task

Let Leverage help you get instant answers and work faster with sovereign AI.
